

The Canadian Montessori Teacher Education Institute

Daniel Jutras Ph.D. Master Teacher

ELEMENTARY MONTESSORI GEOMETRY ALBUM

ELEMENTARY MONTESSORI GEOMETRY ALBUM

Table of contents

History of geometry

Scope in geometry:

Shapes

Sensorial exploration of shapes

Plane geometric figures (two-dimensional)

Geometric solids (three-dimensional)

Bases for geometric solids (plane geometry and solid geometry)

Constructor triangles

Constructor blue triangles

Classified nomenclature of geometry

Knowledge from Manipulation of Figures, Solid and Plane

A Solid cannot be in two places at the same time

A Solid as a state of matter

Geometric Solid (three-dimensional)

The surface of a solid

The surface of a solid, the line and the point in the solid: from the solid to the point

The point, the line and the surface as the builders of geometry: from the point to the solid

Lines

Presentation of the line, the ray, the line segment

Presentation of the position of the straight line in space

Horizontal line

Vertical Line

Oblique Line

Presentation of the position of the straight line on the plane

Presentation of the plane in geometry:

Presentation of the position of the line on the plane

Presentation of the relationship between lines on the same plane

Intersecting lines

Paralell lines

Convergent Lines

Divergent Lines

Perpendicular lines

Angle

Presentation of the whole angle

Presentation of the straight angle

Presentation of the right angle

Presentation of the acute angle

Presentation of the obtuse angle

Presentation of the parts of the angle

Presentation of the theorem: “The amplitude of the angle does not depend on the length of its arms
Presentation of the measurement of angles
Presentation of the addition applied to the amplitude of angles
Presentation of the subtraction applied to the amplitude of angles
Presentation of the relationship between lines on the same plane
Oblique and Perpendicular Lines

Relationships between angles on the same plane

Presentation of the Adjacent Angles
Presentation of the Complementary Angles
Presentation of the Supplementary Angles
Presentation of Vertical Angles or Angles opposite by the Vertex
Presentation of Exterior, Interior, Alternate and Corresponding angles

Closed plane figures

Presentation of the formation of Plane Figures
Presentation of Convex and Concave Figures
Presentation of Convex and Concave Figures

Plane geometric figures

Presentation of the formation of Plane Figures
Formation of Plane Figures

Triangles

Classification of triangles

Presentation of the first classification of the triangles according to their sides
Presentation of the second classification of the triangles according to their angles
Presentation of the third classification of the triangles according to their sides and angles

Parts of a triangle

Surface
Side
Angle
Vertex
Contour
Perimeter
Base
Height or Altitude
Perpendicular Bisector
Median
Angle Bisector
Concurrency points

Measuring angles

Presentation of the measurement of the angle the Sumerians’ way
Presentation of the measurement of the angle with the protractor
Presentation of the measurement of the angle with the geometric sticks

Regular and irregular triangles

Sides of a right-angle triangle

Quadrilaterals

Presentation of the shapes:

Common quadrilateral

Trapezium

Chevron

Kite

Common parallelogram

Rectangle

Rhombus

Square

Classification of quadrilaterals

Parts of a quadrilateral

Diagonal

Minor and major base

Median

Base and height are correlative terms

Regular and irregular quadrilaterals

Polygons

Parts of the irregular polygon

Parts of the regular polygon

Circles

The circle and its parts

Relationship between a straight line and a circle

Relationship between two circles

Congruency, similarity and equivalence

Application of the concepts

Presentation for transitivity
